DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 6 recites the limitation "the channel selection" in line two of the claim.

There is insufficient antecedent basis for this limitation in the claim. This claim has not yet been searched because the channel selection circuit has not been clearly defined in the claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 11, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Schrader (6313464).

Referring to **claims 1 and 11**, Schrader shows a transmitting of a light beam to a target (figure 2), reflecting the light beam (figure 2 Ref 17f, 20f, and figure 5), eliminating pulses smaller than a reference voltage (figure 5), outputting the pulse to a processor (figure 5-7), repeating the steps (A) and (B) to obtain a second received signal, when in the first received signal, no pulse is higher than the reference voltage (figure 5 and column 7 lines 15-55), and amplifying the second received signal and outputting to the processor to execute the operational process (figure 5 and column 7 lines 15-55).

Referring to claim 2, Schrader shows the use of a comparison circuit in step (C) (figure 5 and column 7 lines 15-55).

Referring to **claim 3**, Schrader shows the use of a gain circuit to amplify the signal in step (F) (figure 5 and column 7 lines 15-55).

Referring to **claim 12**, Schrader shows the use of a processor receiving and processing the pulse of amplified signal and an inherent channel selection circuit electronically connecting the processor to the comparison circuit or to the gain circuit selectively.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 5, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schrader (6313464).

Referring to **claim 4**, Schrader shows a amplifier that amplifies a non-linear signal (column 5 line 15-65) however does not explicitly say that the amplifier amplifies the signal non-linearly. It would have been obvious to use a non-linear amplifier to amplify such a signal because the signal is non-linear.

Referring to **claim 5 and 13**, Schrader shows an amplifier that uses feedback to amplify the signal however does not say that the feedback is from the output terminal of

the gain circuit to the input terminal of the gain circuit however this type of gain is well known and adds no new or unexpected results.
